

January 16, 2008

BroadSoft is pleased to announce that the following Polycom devices and device firmware versions have been formally validated with the specified BroadWorks Releases. The devices listed below have met an acceptable level of conformance with the BroadWorks SIP interface. Any remaining issues and limitations from the interoperability testing are documented in the BroadSoft Partner Configuration Guide (PCG) for the devices below. The PCG is available on the BroadSoft Customer KnowledgeBase.

BroadSoft validates that the device works properly with the BroadWorks SIP interface. BroadSoft does not validate qualitative aspects of the device or other device capabilities, which are outside the scope of the SIP signaling interface. For device feature and performance testing results, please consult Polycom.

The validation is only for the Polycom firmware release(s) and BroadWorks software versions listed below. Any other previous releases that may have been tested are documented in the PCG.

Polycom Kirk Wireless Server  
600v3\*  
BroadWorks Release 13

\*This validation applies to all maintenance releases to this firmware version

Thanks,
